## About the Poll

These results are based on a survey of 800 likely voters in the 2024 General Election in Massachusetts. Voters were contacted via text message invitation to an online survey and by live telephone interviewers calling landline and cell phones. Both modes used conventional registration-based sampling procedures. Responses were collected September 12-18, 2024.

Results were weighted to known and estimated parameters for likely voters by age and gender, race, party, education, and region within Massachusetts. Demographic targets were based on analysis of American Community Survey and state voter registration data. Political party was estimated using state voter registration data, benchmark surveys, and turnout from prior elections. The margin of sampling error for the entire sample is +/- 4.1 percentage points with a 95 percent level of confidence, including the design effect. All surveys are potentially subject to non-sampling error.

The WBUR / Commonwealth poll was conducted by The MassINC Polling Group and made possible through a grant from the Knight Election Hub.
