

Crosstabs

University of Massachusetts Amherst/WCVB
October 2026 Massachusetts Poll

Field Dates:	October 5 –12, 2026
Sample:	800 Registered Voters
Margin of Error:	4.2%

YouGov interviewed 852 registered voters in the state of Massachusetts. The respondents were then matched down to a sample of 800 to produce the final dataset. The respondents were matched to a sampling frame of registered voters in Massachusetts on gender, age, race, and education. The frame was constructed by stratified sampling from the full 2024 Current Population Survey (CPS) sample, restricted to Massachusetts residents who were registered to vote.

Cases were selected by stratified sampling from this subset, with selection within strata by weighted sampling with replacement (using the person weights on the public use file). The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and home ownership. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2024 presidential vote choice as well as gender, age, race, and education, to produce the final weight.
